Foreword

- 1 This is version 2.0.1 of the Linux Standard Base Core Specification for PPC64. An implementation of this version of
- 2 the specification may not claim to be an implementation of the Linux Standard Base unless it has successfully
- 3 completed the compliance process as defined by the Free Standards Group.

Introduction

1 The LSB defines a binary interface for application programs that are compiled and packaged for LSB-conforming
2 implementations on many different hardware architectures. Since a binary specification shall include information
3 specific to the computer processor architecture for which it is intended, it is not possible for a single document to
4 specify the interface for all possible LSB-conforming implementations. Therefore, the LSB is a family of
5 specifications, rather than a single one.

6 This document should be used in conjunction with the documents it references. This document enumerates the system
7 components it includes, but descriptions of those components may be included entirely or partly in this document,
8 partly in other documents, or entirely in other reference documents. For example, the section that describes system
9 service routines includes a list of the system routines supported in this interface, formal declarations of the data
10 structures they use that are visible to applications, and a pointer to the underlying referenced specification for
11 information about the syntax and semantics of each call. Only those routines not described in standards referenced by
12 this document, or extensions to those standards, are described in the detail. Information referenced in this way is as
13 much a part of this document as is the information explicitly included here.

I. Introductory Elements

Chapter 1. Scope

1.1. General

1 The Linux Standard Base (LSB) defines a system interface for compiled applications and a minimal environment for
2 support of installation scripts. Its purpose is to enable a uniform industry standard environment for high-volume
3 applications conforming to the LSB.

4 These specifications are composed of two basic parts: A common specification ("LSB-generic") describing those parts
5 of the interface that remain constant across all implementations of the LSB, and an architecture-specific specification
6 ("LSB-arch") describing the parts of the interface that vary by processor architecture. Together, the LSB-generic and
7 the architecture-specific supplement for a single hardware architecture provide a complete interface specification for
8 compiled application programs on systems that share a common hardware architecture.

9 The LSB-generic document shall be used in conjunction with an architecture-specific supplement. Whenever a section
10 of the LSB-generic specification shall be supplemented by architecture-specific information, the LSB-generic
11 document includes a reference to the architecture supplement. Architecture supplements may also contain additional
12 information that is not referenced in the LSB-generic document.

13 The LSB contains both a set of Application Program Interfaces (APIs) and Application Binary Interfaces (ABIs). APIs
14 may appear in the source code of portable applications, while the compiled binary of that application may use the
15 larger set of ABIs. A conforming implementation shall provide all of the ABIs listed here. The compilation system
16 may replace (e.g. by macro definition) certain APIs with calls to one or more of the underlying binary interfaces, and
17 may insert calls to binary interfaces as needed.

18 The LSB is primarily a binary interface definition. Not all of the source level APIs available to applications may be
19 contained in this specification.

1.2. Module Specific Scope

20 This is the PPC64 architecture specific Core module of the Linux Standards Base (LSB). This module supplements the
21 generic LSB Core module with those interfaces that differ between architectures.

22 Interfaces described in this module are mandatory except where explicitly listed otherwise. Core interfaces may be
23 supplemented by other modules; all modules are built upon the core.

Chapter 2. Normative References

1 The specifications listed below are referenced in whole or in part by the Linux Standard Base. In this specification,
 2 where only a particular section of one of these references is identified, then the normative reference is to that section
 3 alone, and the rest of the referenced document is informative.

Chapter 3. Requirements

3.1. Relevant Libraries

1 The libraries listed in Table 3-1 shall be available on PPC64 Linux Standard Base systems, with the specified runtime
2 names. These names override or supplement the names specified in the generic LSB specification. The specified
3 program interpreter, referred to as proginterp in this table, shall be used to load the shared libraries specified by
4 DT_NEEDED entries at run time.

5 **Table 3-1. Standard Library Names**

| Library | Runtime Name |
|------------|--------------------------|
| libm | libm.so.6 |
| libdl | libdl.so.2 |
| libcrypt | libcrypt.so.1 |
| libc | libc.so.6 |
| libpthread | libpthread.so.0 |
| proginterp | /lib64/ld-lsb-ppc64.so.2 |
| libgcc_s | libgcc_s.so.1 |
| libncurses | libncurses.so.5 |
| libz | libz.so.1 |
| libutil | libutil.so.1 |

6
7 These libraries will be in an implementation-defined directory which the dynamic linker shall search by default.

3.2. LSB Implementation Conformance

8 A conforming implementation shall satisfy the following requirements:

- 9 • The implementation shall implement fully the architecture described in the hardware manual for the target
10 processor architecture.
- 11 • The implementation shall be capable of executing compiled applications having the format and using the system
12 interfaces described in this document.
- 13 • The implementation shall provide libraries containing the interfaces specified by this document, and shall provide a
14 dynamic linking mechanism that allows these interfaces to be attached to applications at runtime. All the interfaces
15 shall behave as specified in this document.
- 16 • The map of virtual memory provided by the implementation shall conform to the requirements of this document.
- 17 • The implementation's low-level behavior with respect to function call linkage, system traps, signals, and other such
18 activities shall conform to the formats described in this document.

- 19 • The implementation shall provide all of the mandatory interfaces in their entirety.
- 20 • The implementation may provide one or more of the optional interfaces. Each optional interface that is provided
- 21 shall be provided in its entirety. The product documentation shall state which optional interfaces are provided.
- 22 • The implementation shall provide all files and utilities specified as part of this document in the format defined here
- 23 and in other referenced documents. All commands and utilities shall behave as required by this document. The
- 24 implementation shall also provide all mandatory components of an application's runtime environment that are
- 25 included or referenced in this document.
- 26 • The implementation, when provided with standard data formats and values at a named interface, shall provide the
- 27 behavior defined for those values and data formats at that interface. However, a conforming implementation may
- 28 consist of components which are separately packaged and/or sold. For example, a vendor of a conforming
- 29 implementation might sell the hardware, operating system, and windowing system as separately packaged items.
- 30 • The implementation may provide additional interfaces with different names. It may also provide additional
- 31 behavior corresponding to data values outside the standard ranges, for standard named interfaces.

3.3. LSB Application Conformance

32 A conforming application shall satisfy the following requirements:

- 33 • Its executable files are either shell scripts or object files in the format defined for the Object File Format system
- 34 interface.
- 35 • Its object files participate in dynamic linking as defined in the Program Loading and Linking System interface.
- 36 • It employs only the instructions, traps, and other low-level facilities defined in the Low-Level System interface as
- 37 being for use by applications.
- 38 • If it requires any optional interface defined in this document in order to be installed or to execute successfully, the
- 39 requirement for that optional interface is stated in the application's documentation.
- 40 • It does not use any interface or data format that is not required to be provided by a conforming implementation,
- 41 unless:
 - 42 • If such an interface or data format is supplied by another application through direct invocation of that application
 - 43 during execution, that application is in turn an LSB conforming application.
 - 44 • The use of that interface or data format, as well as its source, is identified in the documentation of the application.
- 45 • It shall not use any values for a named interface that are reserved for vendor extensions.

46 A strictly conforming application does not require or use any interface, facility, or implementation-defined extension

47 that is not defined in this document in order to be installed or to execute successfully.

Chapter 4. Definitions

1 For the purposes of this document, the following definitions, as specified in the *ISO/IEC Directives, Part 2, 2001, 4th*
2 *Edition*, apply:

3 can

4 be able to; there is a possibility of; it is possible to

5 cannot

6 be unable to; there is no possibility of; it is not possible to

7 may

8 is permitted; is allowed; is permissible

9 need not

10 it is not required that; no...is required

11 shall

12 is to; is required to; it is required that; has to; only...is permitted; it is necessary

13 shall not

14 is not allowed [permitted] [acceptable] [permissible]; is required to be not; is required that...be not; is not to be

15 should

16 it is recommended that; ought to

17 should not

18 it is not recommended that; ought not to

Chapter 5. Terminology

1 For the purposes of this document, the following terms apply:

2 archLSB

3 The architectural part of the LSB Specification which describes the specific parts of the interface that are
4 platform specific. The archLSB is complementary to the gLSB.

5 Binary Standard

6 The total set of interfaces that are available to be used in the compiled binary code of a conforming application.

7 gLSB

8 The common part of the LSB Specification that describes those parts of the interface that remain constant across
9 all hardware implementations of the LSB.

10 implementation-defined

11 Describes a value or behavior that is not defined by this document but is selected by an implementor. The value or
12 behavior may vary among implementations that conform to this document. An application should not rely on the
13 existence of the value or behavior. An application that relies on such a value or behavior cannot be assured to be
14 portable across conforming implementations. The implementor shall document such a value or behavior so that it
15 can be used correctly by an application.

16 Shell Script

17 A file that is read by an interpreter (e.g., awk). The first line of the shell script includes a reference to its
18 interpreter binary.

19 Source Standard

20 The set of interfaces that are available to be used in the source code of a conforming application.

21 undefined

22 Describes the nature of a value or behavior not defined by this document which results from use of an invalid
23 program construct or invalid data input. The value or behavior may vary among implementations that conform to
24 this document. An application should not rely on the existence or validity of the value or behavior. An application
25 that relies on any particular value or behavior cannot be assured to be portable across conforming
26 implementations.

27 unspecified

28 Describes the nature of a value or behavior not specified by this document which results from use of a valid
29 program construct or valid data input. The value or behavior may vary among implementations that conform to
30 this document. An application should not rely on the existence or validity of the value or behavior. An application
31 that relies on any particular value or behavior cannot be assured to be portable across conforming
32 implementations.

33 Other terms and definitions used in this document shall have the same meaning as defined in Chapter 3 of the Base
34 Definitions volume of ISO POSIX (2003).

Chapter 6. Documentation Conventions

1 Throughout this document, the following typographic conventions are used:

2 `function()`

3 the name of a function

4 **command**

5 the name of a command or utility

6 `CONSTANT`

7 a constant value

8 *parameter*

9 a parameter

10 `variable`

11 a variable

12 Throughout this specification, several tables of interfaces are presented. Each entry in these tables has the following
13 format:

14 `name`

15 the name of the interface

16 `(symver)`

17 An optional symbol version identifier, if required.

18 `[refno]`

19 A reference number indexing the table of referenced specifications that follows this table.

20 For example,

21

| |
|-------------------------------------|
| <code>forkpty(GLIBC_2.0) [1]</code> |
|-------------------------------------|

22 refers to the interface named `forkpty` with symbol version `GLIBC_2.0` that is defined in the first of the listed
23 references below the table.

I. Low Level System Information

Chapter 1. Machine Interface

1.1. Processor Architecture

1 The PowerPC Architecture is specified by the following documents:

- 2 • 64-bit PowerPC ELF ABI Supplement
- 3 • The PowerPC™ Architecture
- 4 • The PowerPC™ Architecture, Book I Changes
- 5 • The PowerPC™ Architecture, Book II Changes
- 6 • The PowerPC™ Architecture, Book III Changes

7 Only the features of the PowerPC processor instruction set may be assumed to be present. An application is
8 responsible for determining if any additional instruction set features are available before using those additional
9 features. If a feature is not present, then the application may not use it.

10 Only instructions which do not require elevated privileges may be used.

11 Applications may not make system calls directly. The interfaces in the C library must be used instead.

12 An implementation must support the 64-bit computation mode as described in The PowerPC™ Architecture.

13 Applications conforming to this specification must provide feedback to the user if a feature that is required for correct
14 execution of the application is not present. Applications conforming to this specification should attempt to execute in
15 a diminished capacity if a required feature is not present.

16 This specification does not provide any performance guarantees of a conforming system. A system conforming to this
17 specification may be implemented in either hardware or software.

1.2. Data Representation

18 LSB-conforming applications shall use the data representation as defined in Chapter 3 of the 64-bit PowerPC ELF
19 ABI Supplement.

1.3. Byte Ordering

20 LSB-conforming applications shall use big-endian byte ordering. LSB-conforming implementations may support
21 little-endian applications.

1.4. Fundamental Types

22 LSB-conforming applications shall use the fundamental types as defined in Chapter 3 of the 64-bit PowerPC ELF ABI
23 Supplement.

24 LSB-conforming applications shall not use the long double fundamental type.

1.5. Aggregates and Unions

25 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

1.6. Bit Fields

26 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

Chapter 2. Function Calling Sequence

- 1 LSB-conforming applications shall use the function calling sequence as defined in Chapter 3 of the 64-bit PowerPC
- 2 ELF ABI Supplement.

2.1. Registers

- 3 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

2.2. Stack Frame

- 4 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

2.3. Parameter Passing

- 5 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

2.4. Return Values

- 6 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

2.5. Function Descriptors

- 7 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

Chapter 3. Traceback Tables

- 1 LSB-conforming applications shall use the traceback tables as defined in Chapter 3 of the 64-bit PowerPC ELF ABI
- 2 Supplement.

3.1. Mandatory Fields

- 3 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

3.2. Optional Fields

- 4 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

Chapter 4. Process Initialization

- 1 LSB-conforming applications shall use the Operating System Interfaces as defined in Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.
- 2

4.1. Registers

- 3 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

4.2. Process Stack

- 4 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

Chapter 5. Coding Examples

1 LSB-conforming applications may implement fundamental operations using the Coding Examples as defined in
2 Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.1. Code Model Overview

3 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.2. The TOC Section

4 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.3. TOC Assembly Language Syntax

5 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.4. Function Prologue and Epilogue

6 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.5. Register Saving and Restoring Functions

7 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.6. Saving General Registers Only

8 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.7. Saving General Registers and Floating Point Registers

9 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.8. Saving Floating Point Registers Only

10 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.9. Save and Restore Services

11 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.10. Data Objects

- 12 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.11. Function Calls

- 13 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.12. Branching

- 14 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

5.13. Dynamic Stack Space Allocation

- 15 See Chapter 3 of the 64-bit PowerPC ELF ABI Supplement.

II. Object Format

2 LSB-conforming implementations shall support an object file , called Executable and Linking Format (ELF) as
3 defined by the 64-bit PowerPC ELF ABI Supplement and as supplemented by the Linux Standard Base Specification
4 and this document. LSB-conforming implementations need not support tags related functionality. LSB-conforming
5 applications must not rely on tags related functionality.

Chapter 6. ELF Header

- 1 LSB-conforming applications shall use the ELF header as defined in 64-bit PowerPC ELF ABI Supplement, Chapter
- 2 4.

Chapter 7. Special Sections

1 The following sections are defined in the 64-bit PowerPC ELF ABI Supplement.

2 **Table 7-1. ELF Special Sections**

| Name | Type | Attributes |
|---------|--------------|-------------------------|
| .glink | SHT_PROGBITS | SHF_ALLOC+SHF_EXECINSTR |
| .got | SHT_PROGBITS | SHF_ALLOC+SHF_WRITE |
| .plt | SHT_NOBITS | SHF_ALLOC+SHF_WRITE |
| .sbss | SHT_NOBITS | SHF_ALLOC+SHF_WRITE |
| .sdata | SHT_PROGBITS | SHF_ALLOC+SHF_WRITE |
| .toc | SHT_PROGBITS | SHF_ALLOC+SHF_WRITE |
| .tocbss | SHT_NOBITS | SHF_ALLOC+SHF_WRITE |

3
4 **.glink**
5 This section may be used to hold the global linkage table which aids the procedure linkage table. See Procedure
6 Linkage Table in Chapter 5 of the processor supplement for more information

7 **.got**
8 This section may be used to hold the Global Offset Table, or GOT. See The Toc Section and Coding Examples in
9 Chapter 3 and Global Offset Table in Chapter 5 of the processor supplement for more information

10 **.plt**
11 This section holds the procedure linkage table. See Procedure Linkage Table in Chapter 5 of the processor
12 supplement for more information

13 **.sbss**
14 This section holds uninitialized data that contribute to the program's memory image. The system initializes the
15 data with zeroes when the program begins to run.

16 **.sdata**
17 This section holds initialized small data that contribute to the program memory image.

18 **.toc**
19 This section may be used to hold the initialized Table of Contents, or TOC

.tocbss
This section may be used to hold the uninitialized portions of the TOC. This data may also be stored as
zero-initialized data in a .toc section

Chapter 8. TOC

- 1 LSB-conforming applications shall use the Table of Contents (TOC) as defined in 64-bit PowerPC ELF ABI
- 2 Supplement, Chapter 4.

Chapter 9. Symbol Table

- 1 LSB-conforming applications shall use the Symbol Table as defined in Chapter 4 of the 64-bit PowerPC ELF ABI
- 2 Supplement.

9.1. Symbol Values

- 3 See Chapter 4 of the 64-bit PowerPC ELF ABI Supplement.

Chapter 10. Relocation

- 1 LSB-conforming applications shall use Relocations as defined in Chapter 4 of the 64-bit PowerPC ELF ABI
- 2 Supplement.

10.1. Relocation Types

- 3 See Chapter 4 of the 64-bit PowerPC ELF ABI Supplement.

III. Program Loading and Dynamic Linking

- 2 LSB-conforming implementations shall support the object file information and system actions that create running
- 3 programs as specified in the System V ABI, 64-bit PowerPC ELF ABI Supplement and as supplemented by the Linux
- 4 Standard Base Specification and this document.

Chapter 11. Program Loading

1 See 64-bit PowerPC ELF ABI Supplement, Chapter 5.1.

Chapter 12. Dynamic Linking

1 See 64-bit PowerPC ELF ABI Supplement, Chapter 5.2.

12.1. Dynamic Section

2 The following dynamic entries are defined in the 64-bit PowerPC ELF ABI Supplement, Chapter 5.2.

3 DT_JMPREL

4 This entry is associated with a table of relocation entries for the procedure linkage table. This entry is mandatory
5 both for executable and shared object files

6 DT_PLTGOT

7 This entry's `d_ptr` member gives the address of the first byte in the procedure linkage table

8 In addition the following dynamic entries are also supported:

9 DT_RELACOUNT

10 The number of relative relocations in `.rela.dyn`

12.2. Global Offset Table

11 See 64-bit PowerPC ELF ABI Supplement, Chapter 5.2.2.

12.3. Function Addresses

12 See 64-bit PowerPC ELF ABI Supplement, Chapter 5.2.3.

12.4. Procedure Linkage Table

13 See 64-bit PowerPC ELF ABI Supplement, Chapter 5.2.4.

I. Base Libraries

Chapter 1. Libraries

1 An LSB-conforming implementation shall support base libraries which provide interfaces for accessing the operating
2 system, processor and other hardware in the system.

3 Only those interfaces that are unique to the PowerPC 64 platform are defined here. This section should be used in
4 conjunction with the corresponding section in the Linux Standard Base Specification.

1.1. Program Interpreter/Dynamic Linker

5 The LSB specifies the Program Interpreter to be /lib64/ld-lsb-ppc64.so.2.

1.2. Interfaces for libc

6 Table 1-1 defines the library name and shared object name for the libc library

7 **Table 1-1. libc Definition**

| | |
|----------|-----------|
| Library: | libc |
| SONAME: | libc.so.6 |

9 The behavior of the interfaces in this library is specified by the following specifications:

Large File Support
this specification
SUSv2
ISO POSIX (2003)
SVID Issue 3
10 SVID Issue 4

1.2.1. RPC

11 1.2.1.1. Interfaces for RPC

12 An LSB conforming implementation shall provide the architecture specific functions for RPC specified in Table 1-2,
13 with the full functionality as described in the referenced underlying specification.

14 **Table 1-2. libc - RPC Function Interfaces**

| | | | | |
|----------------------------------|------------------------------|--------------------------------|--------------------------|---------------------------|
| authnone_create(GLIBC_2.3) [1] | pmap_unset(GLIBC_2.3) [2] | svcerr_weakauth(GLIBC_2.3) [3] | xdr_float(GLIBC_2.3) [3] | xdr_u_char(GLIBC_2.3) [3] |

1.3. Data Definitions for libc

216 This section defines global identifiers and their values that are associated with interfaces contained in libc. These
 217 definitions are organized into groups that correspond to system headers. This convention is used as a convenience for
 218 the reader, and does not imply the existence of these headers, or their content.

219 These definitions are intended to supplement those provided in the referenced underlying specifications.

220 This specification uses ISO/IEC 9899 C Language as the reference programming language, and data definitions are
 221 specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of
 222 these data objects does not preclude their use by other programming languages.

1.3.1. errno.h

```
223
224 #define EDEADLOCK          58
```

1.7. Interface Definitions for libgcc_s

617 The following interfaces are included in libgcc_s and are defined by this specification. Unless otherwise noted, these
618 interfaces shall be included in the source standard.

619 Other interfaces listed above for libgcc_s shall behave as described in the referenced base document.

`_Unwind_DeleteException`

Name

620 `_Unwind_DeleteException` — private C++ error handling method

Synopsis

621 `void _Unwind_DeleteException((struct _Unwind_Exception *object));`

Description

622 `_Unwind_DeleteException` deletes the given exception *object*. If a given runtime resumes normal execution
 623 after catching a foreign exception, it will not know how to delete that exception. Such an exception shall be deleted by
 624 calling `_Unwind_DeleteException`. This is a convenience function that calls the function pointed to by the
 625 *exception_cleanup* field of the exception header.

`_Unwind_Find_FDE`

Name

626 `_Unwind_Find_FDE` — private C++ error handling method

Synopsis

627 `fde * _Unwind_Find_FDE(void *pc, (struct dwarf_eh_bases *bases));`

Description

628 `_Unwind_Find_FDE` looks for the object containing *pc*, then inserts into *bases*.

`_Unwind_ForcedUnwind`

Name

629 `_Unwind_ForcedUnwind` — private C++ error handling method

Synopsis

```
630 _Unwind_Reason_Code _Unwind_ForcedUnwind((struct _Unwind_Exception *object),  
631 _Unwind_Stop_Fn stop, void *stop_parameter);
```

Description

632 `_Unwind_ForcedUnwind` raises an exception for forced unwinding, passing along the given exception *object*,
633 which should have its *exception_class* and *exception_cleanup* fields set. The exception *object* has been allocated by
634 the language-specific runtime, and has a language-specific format, except that it shall contain an `_Unwind_Exception`
635 struct.

636 Forced unwinding is a single-phase process. *stop* and *stop_parameter* control the termination of the unwind
637 process instead of the usual personality routine query. *stop* is called for each unwind frame, with the parameters
638 described for the usual personality routine below, plus an additional *stop_parameter*.

Return Value

639 When *stop* identifies the destination frame, it transfers control to the user code as appropriate without returning,
640 normally after calling `_Unwind_DeleteException`. If not, then it should return an `_Unwind_Reason_Code` value.

641 If *stop* returns any reason code other than `_URC_NO_REASON`, then the stack state is indeterminate from the point
642 of view of the caller of `_Unwind_ForcedUnwind`. Rather than attempt to return, therefore, the unwind library should
643 use the *exception_cleanup* entry in the exception, and then call `abort`.

644 `_URC_NO_REASON`

645 This is not the destination from. The unwind runtime will call frame's personality routine with the
646 `_UA_FORCE_UNWIND` and `_UA_CLEANUP_PHASE` flag set in *actions*, and then unwind to the next frame and call
647 the *stop* function again.

648 `_URC_END_OF_STACK`

649 In order to allow `_Unwind_ForcedUnwind` to perform special processing when it reaches the end of the stack,
650 the unwind runtime will call it after the last frame is rejected, with a `NULL` stack pointer in the context, and the
651 *stop* function shall catch this condition. It may return this code if it cannot handle end-of-stack.

652 `_URC_FATAL_PHASE2_ERROR`

653 The *stop* function may return this code for other fatal conditions like stack corruption.

`_Unwind_GetDataRelBase`

Name

654 `_Unwind_GetDataRelBase` — private IA64 C++ error handling method

Synopsis

655 `_Unwind_Ptr _Unwind_GetDataRelBase((struct _Unwind_Context *context));`

Description

656 `_Unwind_GetDataRelBase` returns the global pointer in register one for *context*.

`_Unwind_GetGR`

Name

657 `_Unwind_GetGR` — private C++ error handling method

Synopsis

658 `_Unwind_Word _Unwind_GetGR((struct _Unwind_Context *context), int index);`

Description

659 `_Unwind_GetGR` returns data at *index* found in *context*. The register is identified by its index: 0 to 31 are for the
660 fixed registers, and 32 to 127 are for the stacked registers.

661 During the two phases of unwinding, only GR1 has a guaranteed value, which is the global pointer of the frame
662 referenced by the unwind *context*. If the register has its NAT bit set, the behavior is unspecified.

`_Unwind_GetIP`

Name

663 `_Unwind_GetIP` — private C++ error handling method

Synopsis

664 `_Unwind_Ptr _Unwind_GetIP((struct _Unwind_Context *context));`

Description

665 `_Unwind_GetIP` returns the instruction pointer value for the routine identified by the unwind *context*.

`_Unwind_GetLanguageSpecificData`

Name

666 `_Unwind_GetLanguageSpecificData` — private C++ error handling method

Synopsis

```
667 _Unwind_Ptr _Unwind_GetLanguageSpecificData((struct _Unwind_Context *context), uint  
668 value);
```

Description

669 `_Unwind_GetLanguageSpecificData` returns the address of the language specific data area for the current stack
670 frame.

`_Unwind_GetRegionStart`

Name

671 `_Unwind_GetRegionStart` — private C++ error handling method

Synopsis

```
672 _Unwind_Ptr _Unwind_GetRegionStart((struct _Unwind_Context *context));
```

Description

673 `_Unwind_GetRegionStart` routine returns the address (i.e., 0) of the beginning of the procedure or code fragment
674 described by the current unwind descriptor block.

`_Unwind_GetTextRelBase`

Name

675 `_Unwind_GetTextRelBase` — private IA64 C++ error handling method

Synopsis

```
676 _Unwind_Ptr _Unwind_GetTextRelBase((struct _Unwind_Context *context));
```

Description

677 `_Unwind_GetTextRelBase` calls the abort method, then returns.

`_Unwind_RaiseException`

Name

678 `_Unwind_RaiseException` — private C++ error handling method

Synopsis

679 `_Unwind_Reason_Code _Unwind_RaiseException((struct _Unwind_Exception *object));`

Description

680 `_Unwind_RaiseException` raises an exception, passing along the given exception *object*, which should have its
 681 *exception_class* and *exception_cleanup* fields set. The exception object has been allocated by the
 682 language-specific runtime, and has a language-specific format, exception that it shall contain an
 683 `_Unwind_Exception`.

Return Value

684 `_Unwind_RaiseException` does not return unless an error condition is found. If an error condition occurs, an
 685 `_Unwind_Reason_Code` is returned:

686 `_URC_END_OF_STACK`

687 The unwinder encountered the end of the stack during phase one without finding a handler. The unwind runtime
 688 will not have modified the stack. The C++ runtime will normally call `uncaught_exception` in this case.

689 `_URC_FATAL_PHASE1_ERROR`

690 The unwinder encountered an unexpected error during phase one, because of something like stack corruption.
 691 The unwind runtime will not have modified the stack. The C++ runtime will normally call `terminate` in this
 692 case.

693 `_URC_FATAL_PHASE2_ERROR`

694 The unwinder encountered an unexpected error during phase two. This is usually a *throw*, which will call
 695 `terminate`.

`_Unwind_Resume`

Name

696 `_Unwind_Resume` — private C++ error handling method

Synopsis

697 `void _Unwind_Resume((struct _Unwind_Exception *object));`

Description

698 `_Unwind_Resume` resumes propagation of an existing exception *object*. A call to this routine is inserted as the end
699 of a landing pad that performs cleanup, but does not resume normal execution. It causes unwinding to proceed further.

`_Unwind_SetGR`

Name

700 `_Unwind_SetGR` — private C++ error handling method

Synopsis

701 `void _Unwind_SetGR((struct _Unwind_Context *context), int index, uint value);`

Description

702 `_Unwind_SetGR` sets the *value* of the register *indexed* for the routine identified by the unwind *context*.

`_Unwind_SetIP`

Name

703 `_Unwind_SetIP` — private C++ error handling method

Synopsis

704 `void _Unwind_SetIP((struct _Unwind_Context *context), uint value);`

Description

705 `_Unwind_SetIP` sets the *value* of the instruction pointer for the routine identified by the unwind *context*

1.8. Interfaces for libdl

| I. Package Format and Installation | 48 |
| 1. Software Installation | 1 |
| 1.1. Package Dependencies..... | 1 |
| 1.2. Package Architecture Considerations | 1 |

I. Package Format and Installation

Chapter 1. Software Installation

1.1. Package Dependencies

- 1 The LSB runtime environment shall provide the following dependencies.
- 2 `lsb-core-ppc64`
 - 3 This dependency is used to indicate that the application is dependent on features contained in the LSB-Core
 - 4 specification.
- 5 Other LSB modules may add additional dependencies; such dependencies shall have the format `lsb-module-ppc64`.

1.2. Package Architecture Considerations

- 6 All packages must specify an architecture of `ppc64`. A LSB runtime environment must accept an architecture of
- 7 `ppc64` even if the native architecture is different.
- 8 The `archnum` value in the Lead Section shall be `0x0010`.

Appendix A. GNU Free Documentation License

1 Version 1.1, March 2000

2 Copyright (C) 2000 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA Everyone is
3 permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

A.1. PREAMBLE

4 The purpose of this License is to make a manual, textbook, or other written document "free" in the sense of freedom: to
5 assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or
6 noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work,
7 while not being considered responsible for modifications made by others.

8 This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the
9 same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

10 We have designed this License in order to use it for manuals for free software, because free software needs free
11 documentation: a free program should come with manuals providing the same freedoms that the software does. But
12 this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or
13 whether it is published as a printed book. We recommend this License principally for works whose purpose is
14 instruction or reference.

A.2. APPLICABILITY AND DEFINITIONS

15 This License applies to any manual or other work that contains a notice placed by the copyright holder saying it can be
16 distributed under the terms of this License. The "Document", below, refers to any such manual or work. Any member
17 of the public is a licensee, and is addressed as "you".

18 A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied
19 verbatim, or with modifications and/or translated into another language.

20 A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the
21 relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and
22 contains nothing that could fall directly within that overall subject. (For example, if the Document is in part a textbook
23 of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of
24 historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or
25 political position regarding them.

26 The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant
27 Sections, in the notice that says that the Document is released under this License.

28 The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the
29 notice that says that the Document is released under this License.

30 A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification
31 is available to the general public, whose contents can be viewed and edited directly and straightforwardly with generic
32 text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available
33 drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats
34 suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup has been

35 designed to thwart or discourage subsequent modification by readers is not Transparent. A copy that is not
36 "Transparent" is called "Opaque".

37 Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format,
38 LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML
39 designed for human modification. Opaque formats include PostScript, PDF, proprietary formats that can be read and
40 edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not
41 generally available, and the machine-generated HTML produced by some word processors for output purposes only.

42 The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold,
43 legibly, the material this License requires to appear in the title page. For works in formats which do not have any title
44 page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the
45 beginning of the body of the text.

A.3. VERBATIM COPYING

46 You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that
47 this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced
48 in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical
49 measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may
50 accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow
51 the conditions in section 3.

52 You may also lend copies, under the same conditions stated above, and you may publicly display copies.

A.4. COPYING IN QUANTITY

53 If you publish printed copies of the Document numbering more than 100, and the Document's license notice requires
54 Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover
55 Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify
56 you as the publisher of these copies. The front cover must present the full title with all words of the title equally
57 prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the
58 covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim
59 copying in other respects.

60 If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit
61 reasonably) on the actual cover, and continue the rest onto adjacent pages.

62 If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a
63 machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a
64 publicly-accessible computer-network location containing a complete Transparent copy of the Document, free of
65 added material, which the general network-using public has access to download anonymously at no charge using
66 public-standard network protocols. If you use the latter option, you must take reasonably prudent steps, when you
67 begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the
68 stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents
69 or retailers) of that edition to the public.

70 It is requested, but not required, that you contact the authors of the Document well before redistributing any large
71 number of copies, to give them a chance to provide you with an updated version of the Document.

A.5. MODIFICATIONS

72 You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above,
73 provided that you release the Modified Version under precisely this License, with the Modified Version filling the role
74 of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of
75 it. In addition, you must do these things in the Modified Version:

- 76 A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of
77 previous versions (which should, if there were any, be listed in the History section of the Document). You may
78 use the same title as a previous version if the original publisher of that version gives permission.
 - 79 B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications
80 in the Modified Version, together with at least five of the principal authors of the Document (all of its principal
81 authors, if it has less than five).
 - 82 C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
 - 83 D. Preserve all the copyright notices of the Document.
 - 84 E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
 - 85 F. Include, immediately after the copyright notices, a license notice giving the public permission to use the
86 Modified Version under the terms of this License, in the form shown in the Addendum below.
 - 87 G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the
88 Document's license notice.
 - 89 H. Include an unaltered copy of this License.
 - 90 I. Preserve the section entitled "History", and its title, and add to it an item stating at least the title, year, new
91 authors, and publisher of the Modified Version as given on the Title Page. If there is no section entitled "History"
92 in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title
93 Page, then add an item describing the Modified Version as stated in the previous sentence.
 - 94 J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the
95 Document, and likewise the network locations given in the Document for previous versions it was based on.
96 These may be placed in the "History" section. You may omit a network location for a work that was published at
97 least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
 - 98 K. In any section entitled "Acknowledgements" or "Dedications", preserve the section's title, and preserve in the
99 section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
 - 100 L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or
101 the equivalent are not considered part of the section titles.
 - 102 M. Delete any section entitled "Endorsements". Such a section may not be included in the Modified Version.
 - 103 N. Do not retitle any existing section as "Endorsements" or to conflict in title with any Invariant Section.
- 104 If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and
105 contain no material copied from the Document, you may at your option designate some or all of these sections as
106 invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These
107 titles must be distinct from any other section titles.
- 108 You may add a section entitled "Endorsements", provided it contains nothing but endorsements of your Modified
109 Version by various parties--for example, statements of peer review or that the text has been approved by an
110 organization as the authoritative definition of a standard.

111 You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover
112 Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of
113 Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already
114 includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are
115 acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the
116 previous publisher that added the old one.

117 The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity
118 for or to assert or imply endorsement of any Modified Version.

A.6. COMBINING DOCUMENTS

119 You may combine the Document with other documents released under this License, under the terms defined in section
120 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the
121 original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice.

122 The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be
123 replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make
124 the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or
125 publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of
126 Invariant Sections in the license notice of the combined work.

127 In the combination, you must combine any sections entitled "History" in the various original documents, forming one
128 section entitled "History"; likewise combine any sections entitled "Acknowledgements", and any sections entitled
129 "Dedications". You must delete all sections entitled "Endorsements."

A.7. COLLECTIONS OF DOCUMENTS

130 You may make a collection consisting of the Document and other documents released under this License, and replace
131 the individual copies of this License in the various documents with a single copy that is included in the collection,
132 provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

133 You may extract a single document from such a collection, and distribute it individually under this License, provided
134 you insert a copy of this License into the extracted document, and follow this License in all other respects regarding
135 verbatim copying of that document.

A.8. AGGREGATION WITH INDEPENDENT WORKS

136 A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a
137 volume of a storage or distribution medium, does not as a whole count as a Modified Version of the Document,
138 provided no compilation copyright is claimed for the compilation. Such a compilation is called an "aggregate", and
139 this License does not apply to the other self-contained works thus compiled with the Document, on account of their
140 being thus compiled, if they are not themselves derivative works of the Document.

141 If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less
142 than one quarter of the entire aggregate, the Document's Cover Texts may be placed on covers that surround only the
143 Document within the aggregate. Otherwise they must appear on covers around the whole aggregate.

A.9. TRANSLATION

144 Translation is considered a kind of modification, so you may distribute translations of the Document under the terms
145 of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders,
146 but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant
147 Sections. You may include a translation of this License provided that you also include the original English version of
148 this License. In case of a disagreement between the translation and the original English version of this License, the
149 original English version will prevail.

A.10. TERMINATION

150 You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License.
151 Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate
152 your rights under this License. However, parties who have received copies, or rights, from you under this License will
153 not have their licenses terminated so long as such parties remain in full compliance.

A.11. FUTURE REVISIONS OF THIS LICENSE

154 The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time
155 to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new
156 problems or concerns. See <http://www.gnu.org/copyleft/>.

157 Each version of the License is given a distinguishing version number. If the Document specifies that a particular
158 numbered version of this License "or any later version" applies to it, you have the option of following the terms and
159 conditions either of that specified version or of any later version that has been published (not as a draft) by the Free
160 Software Foundation. If the Document does not specify a version number of this License, you may choose any version
161 ever published (not as a draft) by the Free Software Foundation.

A.12. How to use this License for your documents

162 To use this License in a document you have written, include a copy of the License in the document and put the
163 following copyright and license notices just after the title page:

164 Copyright (c) YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of
165 the GNU Free Documentation License, Version 1.1 or any later version published by the Free Software Foundation; with the
166 Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being
167 LIST. A copy of the license is included in the section entitled "GNU Free Documentation License".

168 If you have no Invariant Sections, write "with no Invariant Sections" instead of saying which ones are invariant. If you
169 have no Front-Cover Texts, write "no Front-Cover Texts" instead of "Front-Cover Texts being LIST"; likewise for
170 Back-Cover Texts.

171 If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel
172 under your choice of free software license, such as the GNU General Public License, to permit their use in free
173 software.
